

Supporting Nature's Balance™

Conditioner Plus™ TECHNICAL OVERVIEW

A powerful all-in-one 100% natural product made from energised volcanic minerals into a colloidal liquid that supports collagen generation, overall wellbeing, gastro-intestinal health and feed conversion for horses.

6 reasons why some horses may need TuffRock Conditioner+

- 1. The Collagen Effect™** the alumino-silicate key ingredients support the generation of Collagen types I and II, the building blocks of the key amino acids to make-up skin (coat, mane, tail & hoof); connecting tissues (muscle, ligament, tendon & mucosal linings); assists calcium uptake and conversion into skeletal / joint structure (bone & cartilage)
- 2. Feed Conversion & Mucosal Linings** improved by maintaining healthy mucosal linings on the intestine (nutrient pathway) and in the stomach (ulcer protection) plus being slightly alkaline pH range 7.6-7.9 also helps maintain normal healthy pH (acid) levels also provides a calming action when horses are under performance stress.
- 3. Gut Acid Normalisation** by helping to maintain normal gut acid levels you can reduce the risk of tying up, ulcers, or colic (hind gut fermentation) plus this helps in 2 key areas. First, to provide the best environment for gut flora to function properly. Second, to support the generation of synovial joint fluid.
- 4. Toxin binding** we invented the first machine in the world that molecular reinforces (energises) our unique product by inserting a charge into the alumino-silicate matrix (like it had when thrown out of the volcanoes). This is an opposite charge to toxins or pathogens to provide protection from mycotoxins and flatten protein spikes which can naturally with seasonal farm changes.
- 5. Protection** by binding pathogens such as bad bacteria, viruses or toxins we inhibit their reaction with host cells or receptors. Assistance with toxin removal is proven to reduce the risk of founder or laminitis.
- 6. Base Mineral Support** – Conditioner + per 20 ml serve contains just under 5% RDI (Recommended Daily Intake) of the 10 volcanic mineral elements that helped plant & life start on the earth. These provide base loading and for some horses can provide the perfect balance in a simple feeding regime.
