"Since reading the [FAQ](#) page about the Tuffrock Non-Medicated Poultice, I decided to try one of the healing processes on an older horse of mine who has some changes in the front legs. She sometimes gets heat and puffiness around the affected area.

"I proceeded with the TuffRock Non-Medicated Poultice and the TuffRock Conditioner Plus as directed. So one week of applying the Tuffock Non-Medicated Poultice everyday to the front legs, the second week I applied it every second day, then the third week every third day. And my horse was getting 20ml of TuffRock Conditioner Plus twice a day through out the 3 weeks.

"Within three days all the heat and puffiness in the legs had gone. Five weeks later the legs are still looking and feeling fantastic! The TuffRock Conditoner Plus helped repair the collagen to the joints but also made my horses coat look incredible, she looks so healthy now. I am so excited to have found a product that actually works and will help me maintain this matter in the future.

Thanks TuffRock!"
